

MEMORANDUM

To: All teams participating in the nationwide
2010 BEST Octane Production Demonstrations

From: BEST Octane Research Team

Date: March 22, 2010

Re: 2010 Engineering Change Orders

Message:

*** EMERGENCY MAINTENANCE NOTIFICATION ***

Due to repeated operational issues an emergency maintenance window has been opened for all high octane processing plants. This maintenance will extend through April 24, 2010 and will affect the following subsystems:

PROCESSING PLANT:

Only one operator accessible H2O and one operator accessible energy receptacle will be available in all upper level storage areas within the processing plant. We are sorry for any inconvenience this causes. All robot accessible receptacles within the processing cell will remain in full service and operating normally.

Reference section 3.3.2 of the High Octane Game Specific Rules for a description of the storage area affected. The H2O and energy receptacles undergoing maintenance will not be available for use by operator or robot.

For more information contact the plant operations group.
